

## Cash Management Services

### Remote Deposit

#### What is it?

Remote Deposit is a service which allows businesses to scan checks and transmit images to The Business Bank for posting and clearing.

#### How does it work?

Checks you receive at your company are scanned at your office to create a digital deposit. The images are then transmitted to The Business Bank over an encrypted internet connection. The bank receives the file with the deposited images and the deposit is made. The original checks are retained and later destroyed by the client.

#### Benefits to your business:

- **Saves time and money** - Reduces labor costs associated with driving the deposit to the bank
- **Provides convenience** - Deposits can be made daily and as often as you like
- **Puts you in control** - Provides more accuracy and greater control over your cash flow and extends the deposit cut-off time for same-day credit
- **Efficiency**- On line access to check images so there is no need to photocopy checks before depositing them

#### Contact us

The Business Bank's Remote Deposit is a solution to save you time and money. For more information on putting this product to work for your business, contact The Business Bank.
